Daniel Reeves Report

Number of words: 2219

Declaration of AI: The of QuillBot for Grammar and Spell-checking, and aid in formatting latex tables

Title of the action: *Reeves vs CPS*

Court reference number: *FW1738*

Final report of: *xxxxxx for Barwickshire Crown Court*

Dated: *October 1, 2026*

Specialist field: *Digital forensics*

On behalf of the Defendant: *West Midlands Police*

On the instructions of: *West Midlands Police*

Subject matter: *Possession of Darth Vader Images, 15-1-26*

1 Introduction

At 2016-01-15 06:10 GM, West Midlands Police executed an arrest and warrant at the address of Daniel Reeves("The Suspect"); following intelligence linking him to the possession of illegal images of Darth Vader, the possession, creation, and distribution of which were made illegal in 2007. During questioning, The Suspect claimed that:

1. There are no illegal photos on the computer.
2. If there were photos present on the computer, he did not know they were there.
3. He would have deleted photos straight away if he noticed any.

Figure 1: The suspect's claim

During the arrest, a laptop was recovered. The laptop has been imaged (DFI), with all relevant ingest modules activated, and supplied to me by West Midlands Police (Reeves-160126.img):

- MD5 checksum: 4ec6a6889d87cf6adb30564f569fb000
- SHA1 checksum: d99d67dba76dba799b7277e459d3361ae087345e

Figure 2: Case Checksums

This investigation includes The Suspect, his acquaintance Hannah Cole and her associates Alex Morton and Priya Shah.

2 Investigation

My investigation began with investigating the emails of The Suspect in order to establish a potential timeline, I then started to investigate images that appeared on the system and web activity in order to support and develop the chain of events represented by the emails.

2.1 Scope of Investigation

I was commissioned by West Midlands Police to investigate Reeves-160126.img and produce a court report free of bias. In this investigation I will work to the best of my abilities to find evidence that supports or challenges the The Suspect's claim(See Figure 1) in correlation to the Criminal Justice Act(See Figure 60). There are elements of this investigation that are outside of my scope such as establishing the location of The Suspect and or verifying calls that may have happened between The Suspect and others.

2.2 Investigation Findings

2.2.1 Email Analysis

Re:Meeting

On 2025-12-13, The Suspect says it was lovely meeting HC at the "Christmas do" and mentions their shared interest in Star Wars images, At this point they are already using familiar language with each other as he signs off as "Danny" and an emoji (See Figure 22). HC responds and agrees it's great to

meet another Star Wars fan (See Figure 23). The Suspect shares that he's an architect and asks about HC's job and Star Wars image collection (See Figure 24). HC shares she's an HR director and has over a thousand Star Wars images (See Figure 25). The Suspect asks if HC could share some of her Star Wars images (See Figure 26). The Suspect wishes HC a "Happy New Year" and shares a Google Extension for downloading lots of images at once (See Figure 27). HC is excited about the Google Extension and asks him to share some photos with her (See Figure 28). The Suspect asks if HC is on Dropbox to make sharing images easier (See Figure 29). HC confirms her email address for Dropbox sharing (See Figure 30). HC shares that someone on SW_Underground mistakenly gave his email in the chat (See Figure 32). The Suspect comments on this and shares news of a teacher who got arrested for hoarding 100,000 images (See Figure 34).

Re:Fwd: Daniel Reeves shared "For Hannah" with you

On 2026-01-01, HC forwards an automated message and confirms receiving the images from Daniel and sends some back, adding them to a folder (See Figure 31). Daniel thanks Hannah for the images(See Figure 33).

Re:hiding files

On 2026-01-07, HC asks if there's an easy way to hide images (See Figure 39). The Suspect suggests encryption as a solution but highlights its complexity (See Figure 40). HC asks if she can share the information with another friend, which The Suspect agrees to (See Figure 41). HC introduces AM to The Suspect (See Figure 42). AM forwards the email chain to PS (See Figure 43). AM shows appreciation for the advice provided (See Figure 44). The Suspect introduces himself to AM and acknowledges helping him (See Figure 45). PS also thanks The Suspect and emphasises keeping things "confidential" (See Figure 46).

Re:Photos

On 2026-01-09, HC creates a new email chain. HC shares that she hid all her images into a Windows directory plans to encrypt them later (See Figure 49). The Suspect confirms that he's done the same (See Figure 50). PS asks to be informed if anyone figures out how to encrypt the files (See Figure 51). AM asks about the idea of creating a "volume" to hide images, expressing confusion about the process(See Figure 52).

Re:My Photos

On 2026-01-13, The Suspect starts a new email chain without prompting from others. The Suspect Daniel shares that he created a few photos himself, expressing pride in his efforts, after it was discussed in a recent phone call (See Figure 54). HC, AM and PS all confirm later on that they have followed what the suspect has done and generated some images of their own(See Figure 55, 56, 57). It is worthy to note that the Dropbox folders shared by these individuals do not contain Darth Vader images unlike The Suspect who sends and attachmet of 8 Darth Vader images. The last email sent in this chain is from PS on 2026-01-13(See Figure 57).

I analysed the primary account, daniel.reeves@redgroupmail.com, which had the following email configuration (See Figure 3). Analysis of email headers shows a Return-Path from **box5682.bluehost.com** and an IP Address (**77.97.18.212**).Bluehost is a web hosting provider. The account is linked to **cpanel@redgroupmail.com** via **daniel.reeves@redgroupmail.com** and . A reverse DNS lookup

on the IP address, registered to a provider called **WAKEFIELD**, reveals the request came from Virgin Media (UK), with the hostname **smal-19-b2-v4wan-173093 cust723.vm20.cable.virginm.net**.

A total of 233 emails were recovered from the local main client. Of these emails, 20 are directly linked to the investigation due to attachments, discussions of concealment, and inclusion of keywords such as collection(s), Star Wars, star wars, darth vader, Darth Vader, Anakin, encryption, delete, hiding and hide. Within these emails, I identified 1 message that contained attachments that can be classified as category B under the Criminal Justice Act(See Figure 60). Evidence of file transfer, automated messages from WeTransfer and Dropbox, show communications occurring outside the bounds of emails.

The Suspect had the most frequent email interactions with Hannah Cole(HC), followed by Alex Morton (AM) and Priya Shah(PS)—after this point I will refer to these individuals by their first and last initials. HC appears to have introduced both AM and PS to the suspect in later email chains. HC also appears to have connections to two other individuals that are not included in the email chain with The Suspect it is unclear if AM and A1 are the same person, A2 appears to be a complete stranger to the group. A1 is described as a hoarder of images whilst A2 is the victim of a scare prank orchestrated by HC(See Figure 58).

2.2.2 Analysis of Images

A total of 23868 images were identified on the system, only around 800 were relevant to the investigation. These were located across multiple directories, including:

- /img_Reeves-160126.img/vol_vol3/Windows/HRFolderDONOTDELETE
- /img_Reeves-160126.img/vol_3/Users/user/DropBox
- /img_Reeves-160126.img/vol_3/\$Recycle.Bin/S-1-5-21-3437844541-931200928-3235528625-1001/\$RBORQUP.zip
- /img_Reeves-160126.img/vol_vol3/Users/user/Downloads/star wars images - Google Search

From these directories, I was able to gather at least 85 images of Darth Vader (See Figure 1, 2). This exceeds the prosecution threshold of 75 images for the Criminal Justice Act.

- 41 were category A(See Figure 1).
- 44 were category B(See Figure 2).

Additionally, there were examples of images that were recovered from unallocated space, indicating deletion attempts in /img_Reeves-160126.img/vol_3/\$Recycle.Bin/S-1-5-21-3437844541-931200928-3235528625-1001/ and /img_Reeves-160126.img/vol_vol3/Users/user/Downloads/star wars images - Google Search.

2.2.3 Analysis of Web Activity

Browser artefacts were recovered from Google Chrome and Internet Explorer/Microsoft Edge. Investigation of these artefacts revealed:

- 41 web searches

-
- 278 web history
 - 4556 web downloads
 - 4 web bookmarks
 - 496 web cookies
 - 2647 web cache

Analysis of web bookmarks indicates that the suspect visited marketplaces for Star Wars photographs(See Figure 7). Web search analysis reveals multiple searches for Star Wars content, including Darth Vader images, queries about methods to obfuscate data, and visits to image-generation sites(See Figure 4). Web history analysis provides further context to this, showing the The Suspect accessing Youtube videos for encryption and folder hiding, as well as download links for "bulk image downloaders", encryption software and AI-generated images (See Figure 6). Browser cache contained thumbnails of images matching those from the file system, confirming viewing activity. The following extensions were installed on Google Chrome, the image downloader is the only significant item (See Figure ??).

2.2.4 Other Analysis

Within the folders examined for images /img_Reeves-160126.img/vol_vol3/Windows/HRFolderDONOTDELETE/SomeImages.zip/SomeImages there are examples of malware (See Figure 5). I was able to verify this malware using VirusTotal(See Figure 67, 65, 66, 64). These malware do not appear to have the ability to download images onto a system without the user knowing; however, this is outside of my expertise and cannot conduct any further analysis upon it. Additionally, I found an example of encryption at /img_Reeves-160126.img/vol_vol3/Users/user/Documents, Greenman.crypto; created on the same day that Encrypto.exe was installed. I was unable to verify what was contained within the file as this is outside my field of understanding(See Figure 69, 68, 70). There are examples of images sharing the same name as one another but containing separate images, it is unclear if this was a deliberate renaming of files to obfuscate data.

3 My Opinion

3.1 Against Claim A

There is evidence for illegal images on The Suspect's computer. It is my opinion that The Suspect has created and possessed Darth Vader images, as well as distributed them. Based on file system artefacts discussed in section 2.2.3, The Suspect downloaded enough images of Darth Vader to meet the persecution threshold.

3.2 Against Claim B

There is evidence that The Suspect was aware that illegal images were on his computer. It is my opinion that The Suspect willingly engaged with depictions of Darth Vader. This is supported by evidence discussed in section 2.2.1. Furthermore, many images and web results show multiple access attempts. Although it can be said that The Suspect never directly mentions wanting to engage with Darth Vader images, only referring to Star Wars images, other findings show that he was.

3.3 Against Claim C

There is evidence contradicting his claim that he would have deleted illegal images immediately. It is my opinion images were kept for a prolonged period, even going as far as to conceal these images on his system. Although there is evidence for images being deleted (See Section 2.2.2), I am led to believe that these images have been copied into other directories e.g SomeImages.

4 Appendix

4.1 Glossary of Items

4.2 Methodology

4.2.1 Aquisition of Evidence

The digital evidence was provided as a forensic image of The Suspect's laptop (Reeves-160126.img). The image was verified against the MD5 (4ec6a6889d87cf6adb30564f569fb000) and SHA1 (d99d67dba76dba799b727) checksums supplied by the West Midlands Police to ensure forensic integrity(See Figure 2). The file provided was pre-ingested with the following modules (See Figure 10)and so I did not carry out any processing of my own. For the duration of this investigation I used Autopsy 4.22.1 and Hashcalc for cross-checking.

4.2.2 Emails

For this investigation I extracted headers, attachments, and metadata to identify sender, recipient, timestamps, and subject lines. Any attachments were extracted and hashed to maintain evidence integrity. These emails were then used to create a chain of events with correlations to file creation and access on the system. Additionally, I employed the use of Autopsy's timeline feature with filters "Emails Sent" turned on to construct my timeline of events. When searching through these emails I used keywords: hide, hiding, star wars, darth vader, images encryption and collection.

4.2.3 Images

During my investigation a keyword and file-type search was performed using Autopsy. Keywords included Darth Vader and relevant variations to identify pseudo-photographs. However, this did not yield any results as the images followed a more generic naming convention. I targeted certain file types in order to discover more images such as JPEG, PNG, GIF, TIFF, PSD, PDF.A majority of the images were JPEG and PNG. Once discovered I extracted file metadata in order to determine creation, modification, and access dates. Hashes were generated for all images to verify integrity, prevent tampering, and enable cross-reference with emails and web activity.

4.2.4 Web Activity

Browser artefacts were examined for Chrome and Edge profiles during my examination. From the modules that were used on the case prior to case, I was able to analyse history, which identifies visited URLs, downloads, files downloaded and cross-referenced with recovered images,cache, temporary internet files and fragments of images, bookmarks, checked for potential illegal site references.

4.2.5 Other

There was the potential that File Recovery Slack space and File Carving could be used to recover deleted images, but this was outside the scope of my abilities. File Recovery Slack space and unallocated disk space once examined could have allowed me to recover remnants of deleted files. File Carving could have allowed me to reconstruct partially deleted images. Analysis of slack space could have allowed me to determine whether deletion of images were accidental or deliberate.

Malware files were verified using VirusTotal by supplying the MD5 hashes, in order to determine if they were malware or not.

Date: 2025-12-31 07:06:22 GMT

Hi Hannah,

Was lovely to meet you at the Christmas do. Also wonderful to meet someone with a similar interest in Star Wars images. Thought I would share my email address so that we can stay in touch. Also hoping we can share images :-).

Danny

Hey was wonderful, what a gig, had one hell of a hangover the following day!
Yes, good to know a fellow Star Wars fan, it's good to stay in touch.
Yes happy to share some images, but need to do it securely obviously xx
What do you do by the way, did you say you were a lawyer?

I'm an architect. You?
Do you have lots of images? I've only started collecting.

Date: 2025-12-31 07:22:35 GMT

HR director in a very big energy company :-o would get shot out if they knew.

Yes I think I must have a thousand or more, it isn't much, I know a guy who has more than 10,000 but is a pain to share - always hoarding never sharing! bloody nonce. But I will try and connect with him again.

I have them all on an external hard disk and will copy them over to this machine, just don't want hubby knowing. Is there any way he can see what's on this machine?

Hi Hannah

Happy New Year!!!

I wanted to share this Google Extension with you - it allows you to download loads of images at once. Maybe you're already using something like it?

Subject: Re: hiding files
Date: 2026-01-07 08:38:19 GMT

I was looking into this as well after our phone call, i think the best thing to do might be either encrypt all the data which is not easy, store it externally (a pain), or push everything into a Windows directory somewhere - that way it is not easily noticeable.

You could also try to change some extensions to say 'docx' or something, but then you need to remember to change them back!!!

Thank you

do you mind if i share this with another friend, he is also a collector and is very discrete. He also has a friend Priya who is collecting.

Hi Alex, I want to introduce you to Daniel, he is a bit of a techwizz.

Hope his guidance below helps. I think it is really important to keep all this hidden!!!.

We don't mind you sharing with priya, would be good to get to know her and hopefully share files with her too

Criminal Justice Act. Section 160: Possession, distribution, and creation of photographs of Darth Vader

(1) The Offence

It is an offence for a person to possess, distribute, or create any photograph or pseudo-photograph of Darth Vader.

(2) Defences

Where a person is charged with an offence under subsection (1) above, it shall be a defence for them to prove:

- (a) that they had a legitimate reason for distributing or creating the photograph or pseudo-photograph, or for having it in their possession; or
- (b) that they had not themselves seen the photograph or pseudo-photograph and did not know, nor had any cause to suspect, it to be of Darth Vader; or
- (c) that the photograph or pseudo-photograph was sent to them without any prior request made by them or on their behalf, and that they did not keep it for an unreasonable time.

(3) Interpretation

For the purposes of this section:

- (a) “Darth Vader” refers to any representation of the character known as Darth Vader.
- (b) “Pseudo-photograph” means an image created such that the subject of the image is made to look like, or represent, Darth Vader, regardless of the efficacy of the technique applied.

(4) Categorisation

Images of Darth Vader are classified into two categories:

- (a) Category A: Photographic images (real photographs).
- (b) Category B: Pseudo-photographs, including animations, drawings, or modified photographs.

(5) Charging Threshold (CPS Guidance)

For a prosecution to proceed under this section, law enforcement must present evidence meeting the following minimum thresholds:

- (a) 75 Category A images; and/or
- (b) 75 Category B images.
